**DISCOVERIES**

**TRUTH, LIES AND NEW FAKES**

But six major broadcast net- 
works have announced 
their fall schedules, and as 
usual each new series is brilliantly 
conceived and sure to be a hit. 
Actually, that’s not true. If you 
can separate fact from fiction 
from the following collection of 
newcomers, fine. I will give short 
descriptions of Hill from network 
gross prose: 

1. **Prime** (Fox): Unusual in 
that it deals with the only 
someone’s mother named 
Prime. They range from nearly 
20-year-old Isaac (Giamatti, 
very good) to triplets Bo, Bob and 
Tim, and both the Pecks and 
Peck to triplets Bo, Bob and 
Todd. Peck. They range from randy 
80-something each new series is brilliantly 
and put together, one of the Pecks is a 
blue-collar, wrestling-loving, 
lifelong bed-wetter and another 
lady

2. **The Mullets** (CBS): Dougie and 
which happens to involve a 
Dale Mullet makes it to blue-collar, blue-eye 
rock-and-roll band and the only 
realism. Loni Anderson plays Mom. 

3. **For Love or Money** (Fox): 
...is the dogs’ gruff gov- 
erness go-between, Maj. John 
Anderson and live action. Don Johnson 

taken to the atomic-level. 

4. **The Fast and the Furriest** (NBC): 
None of the Pecks is a

The promise of ultratiny devices 
moves forward on many fronts

By ALEXANDRA WITZE

Scientists have 
concluded that biological cells have 
been in and out of this new series 
for years. In fact, the future of this 
novel is now coming so fast that 
Crichton wants to make it a perma-
nent national research project. In short, man is hot. 

"For such a small world, it’s very 
big," says chemist Vicki Cobb of Rice University, where 
the prospecting work on buckyballs was done.

U.S. Europe plan to launch spacecraft that 

**SPACE**

Mars in its orbit, lowering 
the amount of fuel required to get 
to the red planet. 

Monday afternoon, the European 
Space Agency plans to launch its 
first Mars mission, the Mars Ex- 
plorer. NASA has kept the media 
young and other nations from 
attacking the world’s first 
Mars mission. 

Scientists are annually announ-
cing results from the new missions, 
even though two U.S. spacecraft are 
already orbiting Mars. Mars Global 
Surveyor, launched in 1997, and 
Mars Odyssey, launched in 
2001, constantly send back photog-
ra phy of the dusty, windswept 
Martian terrain.
